Job Task

In Case of A Tornado

Hazard Review

In the event of a tornado warning and/or severe weather, DPPEA staff will seek shelter in the entrance area of the women’s restroom. The room through the first of two doors in the women’s restroom is a concrete structure that is windowless and not located on an exterior wall, thus providing more safety than DPPEA offices. DPPEA staff will assume the crouching position in the event of an imminent tornado to protect themselves from debris.
