## Checklist for Finishing

**Significant Aspects:**

Catastrophic Mortality  
Excess Sludge Accumulation

**Potential Environmental Impacts:**

Land, surface water, ground water, air quality

Work activities seek to protect against animal stress or loss, reduce lagoon loading, improve indoor air quality, and seek to prevent emergencies such as fire.

Report anything unusual to farm manager. Examples include constant water running or baby pigs fighting over nipple waterer if clogged, heaters or fan control not working properly, fan not working.

**FEEDERS**

Check feeder adjustment to ensure working properly. Feed should only be visible where the pipe feeder comes out onto trough. Feed trough should not be covered in feed as this is excess.

**WATERERS**

Visually check nipple waterers for leaking water or clogged waterer.

**TEMPERATURE**

Check to make sure temperature is comfortable to animals and that curtain controls activate if needed.

**NEEDLES (SHARPS)**

Dispose of needles (sharps) in container in farrowing barn.

**RODENT BAIT**

Put out rat bait blocks to reduce rodents. This reduces feed wastage, building damage and disease.
