

SOP - Sludge Removal

Check on a routine basis. If you suspect sludge level is too high:

- Contact ABC Farms Land Management for team to verify sludge level.
- If level is too high use contractor recommended by ABC Farms to remove sludge.

NOTE 1: Currently an experiment is under way to develop a “designer bacteria” to reduce sludge-check it with ABC land management before hiring contractor.

NOTE 2: Sludge build up can be significantly reduced by having correct feeder adjustment (no greater than 1 ½”) and preventing feed spills by checking for loose feed line collars and feed pipe drop tube level (tubes will be a min. of 6” below top of feeder).
